TMS Service Agreement Calculator

The TMS Service Agreement Calculator (SAC) is an incredible software program that is designed to quickly figure how much to charge for a residential or light commercial service agreement based on the equipment being covered. You simply select the zone that the equipment is located, enter the equipment being covered and what months you propose to perform the inspections. From this information, the program will automatically calculate the price of the service agreement for 1, 2 and 3 years and will generate a professional looking contract for you to present to your customer. You can even take it one step further and enter the filter requirements for an inspection which will also be calculated into the final sell price and will print on the contract.

If the contract is accepted by the customer, then the SAC Program will help you manage the life of the contract by allowing you to create monthly inspection slips, schedule the inspections and track what filters are needed each month. You can even view on screen the number of inspections you have for each month and drill down to see the details if you so desire.

SAC Features

- Prints professional looking Service Agreements
- Lists what is included in Service Agreement
- Calculates price of Agreements for 1, 2 & 3 years
- Calculates price based on equipment type or estimated time to perform inspection.
- Option to include Trip Charges based on the zone
- Misc. Charges can be included in the calculation
